Screen size supported
4.7-6.2 inch

Product Information

OVERVIEW

The era of virtual reality for smartphones has just begun, and Geneeo VR has decided to do it in style by offering one of the best viewers currently on the market. Unlike other emblazoned VR, it has the important characteristic of being UNIVERSAL and therefore compatible with all smartphones of any brand and model with a 4.7 to 6.2 inch screen size. We recommend using Smartphone models equipped with gyro for a totally immersive all-round experience. Thanks to the high-quality optics of the Geneeo VR, the impressive experience it will give you is unprecedented, able to intensively engage the viewer from a perception point of view, with a 120-degree field of vision compared to the 80 degrees of the most common visors: in practice the difference between being catapulted into a new reality or just looking through a screen. Top-level audio headphones with 3D surround effects are integrated into the structure, a feature not common in other viewers on the current market, allowing you to take an enthralling visual and sound adventure simultaneously. Good news for those who have eye-site problems. Thanks to an advanced optical adjustments system, with the Geneeo VR it is possible to adjust both focal and inter-pupillary distance, ensuring that everyone can use it, without the need to wear glasses. The lightness of the display and the ergonomic mask whose structure has an adjustable padding is ideal for all types of face and ensures maximum comfort. Completing this product is an indispensable Action Button that allows total interactive control during your virtual adventure. The rubber pads inside the box set can be inserted into the viewer's structure, and they serve as a guide for aligning the Smartphone, preventing its movement. The height can be freely adjusted by inserting more rubber pads.

TECH SPECS

Material: premium soft touch finish, body TPU + lycra, head strap

Color: black

Screen size supported: 4.7-6.2 inch

Glass material: Japanese professional optical lens

Vision angle: max 120° (related to the size of phone and the head strap tightness)
